Dual Product Filling

(For weigh fillers)

Now with a unique dual liquid system capability, USB weigh filling technology allows the ability to fill two different products through a single filling tube. With on-the-fly programmable proportional variability and complete statistical feedback analysis. Fill two products in any proportion into the same container, varying containers, varying nozzles, or set up one product while filling another for reducing lost changeover and flush-out time. A huge advantage for contract packers and flexibility. Here is a machine that opens up the door for those crazy marketing minds to dream up unusual container and product scenarios.

Dual Inlets

*Fill 10% of Product A & 90% of Product B
Into the same bottle, or any other combination.*

*Fill Product A on even heads and Product B on
odd heads, or any other combination.*

Fill Product A while cleaning system from Product B.

Mix products directly into the bottle.

This option is now available on new
USB equipment.
