

U.S. Bottlers Machinery Co

Announces our rebuild opportunities on previously owned USB equipment.

Model PGF-72T 1999

Current machine designed with 72 filling stations, Tangential discharge, 94.5" PD, CW rotation. With all 304 ss cabinet external and internal frame, ss cam, ss slide rings, ss posts, ss manifold support and 316 ss liquid system manifolds, rotary unions and a set of valves.

Proposed Rebuild:

Rebuild valves with new outers, inners, bushings, bells, and seals. Rebuild rotary unions and replace silicone hoses and fittings. Clean and repair slide rods, bushings, rollers, and roller blocks as needed. Repair attachment mounting and guarding frame and doors to original 3-sided system (opening for mating discharge). Provide attachments for one bottle size and one neck size. Repair or replace main drive motor and interface connection. Bearings, gearboxes, belts, to be checked, lubricated. Less controls and external tanks/piping/conveyor extensions/pumps/spare parts. **\$249,000**

Options:

180 Gallon Supply Tank, pump, piping, pressure gauge, and inlet valve and float. **\$15,000**

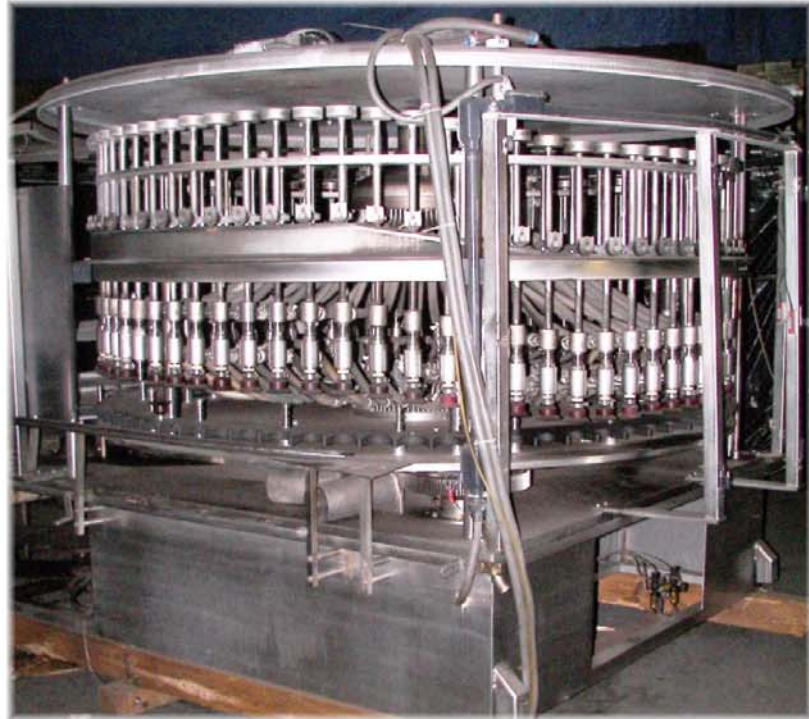

Overflow tank and sensor. **\$8,000**

Full electrics with control panel including panelview operator and PLC - all AB components to new USB standards. **\$30,000**

Additional set of attachments. **\$5,000**

New main bearing installed. **\$5,000**

USB guarantees the quality and integrity of all new componentry and will do its best to test and verify operation of existing hardware. However if original componentry beyond those included in the above statements require change or modification in the rebuild process, it will be discussed with the customer and subject to possible change. No warranty or guarantees are implied within this proposal. The customer may need to make additional changes to meet their standards for local codes or OSHA standards - (for example this machine currently does not include door interlocks). Custom quotation available upon request.

Existing filler before rebuild.

in Charlotte NC

This is a rare chance to own a USB filler at a reduced price and shortened delivery. We don't often come across a used machine that we acquire for a potential rebuild. This machine has the integrity and ss componentry we have always provided - which is why it can be rebuilt into a great opportunity.

Please note that with any rebuild there will be cosmetic issues with cabinet finish, weld marks, scratches, holes, etc that will not effect performance but will be uneconomical to eliminate during the rebuild process.

If additional customization is required for your unique application - the details of this offer may need to be revised.
