Pinch Valves (Fillers)

Piston and weigh filler customers have been using unique pinch valve designs with USB fillers for the past few years. Now we can offer an entirely in house fabricated style for reduced costs and interchangeability.

Designed as a mechanical closing system, this assembly uses off-the-shelf replaceable elements. This allows the options for a large variety of materials for product contact, as well as a spring to close design for these elements; previously unavailable.

See why these valves have led to the breakthroughs in fully cippable equipment within the USB catalogue.
