## Straw Alignment Cappers

(Detergent and cosmetic applications)

This machine design allows for a substantially long straws or brushes to be placed by the USB capper and carefully inserted into the container with a locating gripper system. This system also allows for some compensation of bent straws and alignment within the standard changeparts and turret design of our 22" and 14" pitch machines. Think of this as a "machine within a machine" concept and the limitations on what is possible with this added functionality, expands the USB horizons.

This option is now available on new  
USB equipment.
